

TRANSITION METAL IONS

IA	TRANSITION METAL IONS																		VIIIA
H	IIA																		He
Li	Be																		
Na	Mg																		
K	Ca	Sc	Ti	V	Cr	Mn	Fe	Co	Ni	Cu	Zn	Ga	Ge	As	Se	Br	Kr		
Rb	Sr	Y	Zr	Nb	Mo	Tc	Ru	Rh	Pd	Ag	Cd	In	Sn	Sb	Te	I	Xe		
Cs	Ba	La*	Hf	Ta	W	Re	Os	Ir	Pt	Au	Hg	Tl	Pb	Bi	Po	At	Rn		
Fr	Ra	Ac*	Rf	Db	Sg	Bh	Hs	Mt	* "inner" transition metals go here										

The transition metals always form CATIONS!

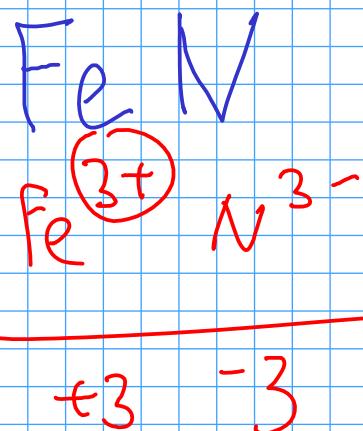

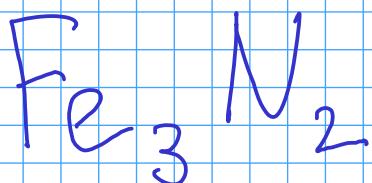

However, many transition metals are capable of forming SEVERAL DIFFERENT CATIONS!

Example: Iron (Fe) forms two cations, depending on the situation: Fe^{2+} or Fe^{3+}

TRANSITION METAL CATIONS

- So how do you know which cation you're dealing with? For now, you'll have to be told
- Either the chemical formula of an ionic compound or the name of an ionic compound can tell you what charge is on the transition metal cation.

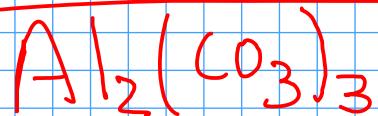

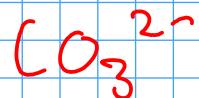

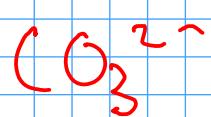

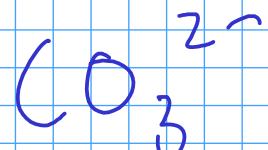

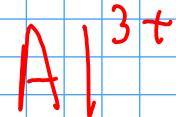

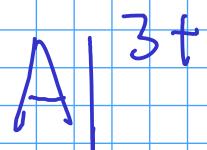

Examples:

POLYATOMIC IONS

- Some MOLECULES can gain or lose electrons to form CATIONS or ANIONS. These are called POLYATOMIC IONS
- Polyatomic ions form ionic compounds in the same way that single-element ions do.

Example:

YOU MUST MEMORIZE THE NAMES AND FORMULAS OF THE MOST COMMON POLYATOMIC IONS. CHECK THE COURSE WEB SITE FOR A LIST!

NAMES OF IONS

- To properly discuss ions and ionic compounds, we have to know how to name them!

CATIONS

3 kinds:

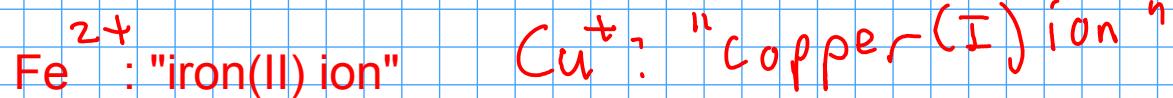

(1) Main group cations (metals that take only one charge when forming ions)

- The element's name is the same as the ion's name!

(2) Transition metal cations (from metals that can form several cations)

- The CHARGE of the cation must be given. Use a ROMAN NUMERAL after the element name to indicate charge!

(3) Polyatomic cations

- Memorize list.

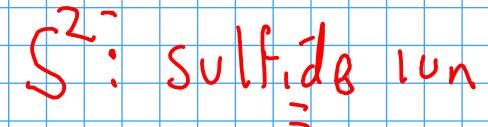

ANIONS

2 kinds

1

Main-group nonmetals

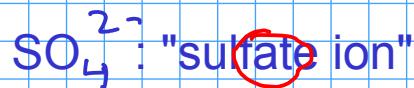

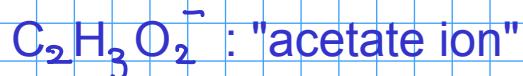

- Use the STEM NAME of the element, then add "-ide" suffix

2.

Polyatomic ions

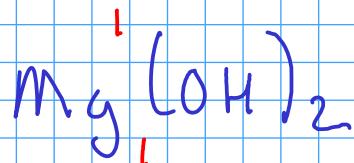

- Memorize list.(see web site, also see Ebbing/Wentworth p133)

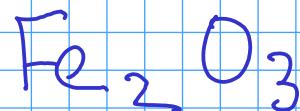

NAMING IONIC COMPOUNDS

- The name of the compound is based on the name of the ions in the compound
- Cation first, anion second

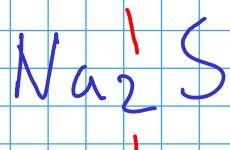

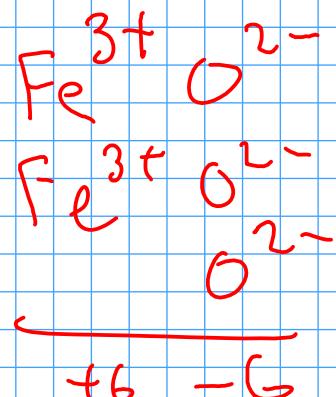

Examples:

magnesium hydroxide

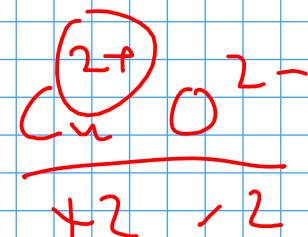

iron(III) oxide

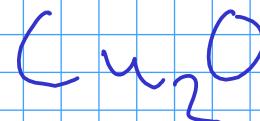

sodium sulfide

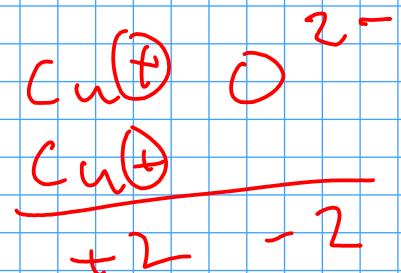

copper(II) oxide

beryllium bromide

copper(I) oxide

Remember to include the Roman numeral for charge in the name of transition metal compounds!
