$123.111 \mathrm{~g} / \mathrm{mul}<$ - Formula weights
22.4 grams of benzene are reacted with excess nitric acid. If 31.6 grams of nitrobenzene are collected from the reaction, what is the percent yield?
To find the percent yield, we need to know both the THEORETICAL and ACTUAL yields of nitrobenzene. From the experiment, we already know the ACTUAL YIELD (31.6 g). We must CALCULATE the theoretical yield!

$$
\begin{aligned}
& 78.114 \mathrm{~g} \mathrm{C} \mathrm{C}_{6} \mathrm{H}_{6}=\operatorname{mol} \mathrm{C}_{6} \mathrm{H}_{6}\left|\mathrm{~mol} \mathrm{C}_{6} \mathrm{H}_{6}=\mathrm{mol} \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NO}_{2}\right| 123.1 \mathrm{gg} \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NO}_{2}=\mathrm{mol} \mathrm{C}_{6} \mathrm{H}_{\mathrm{S}} \mathrm{NO}_{2} \\

25.0 mL of acetic acid solution requires 37.3 mL of 0.150 M sodium hydroxide for complete reaction. The equation for this reaction is:

$$
\mathrm{NaOH}+\mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2} \rightarrow \mathrm{NaC} \mathrm{~N}_{3} \mathrm{O}_{2}+\mathrm{H}_{2} \mathrm{O}
$$

What is the molar concentration of the acetic acid?

$$
\frac{\mathrm{mol}_{\mathrm{HC}}^{2} \mathrm{H}_{3} \mathrm{O}_{2}}{\mathrm{~L} \text { Solution }} \Leftarrow=25.0 \mathrm{~mL} \text { or } 0.0250 \mathrm{~L}
$$

Since we know the volume of solution, we just need to calculate MOLES of acid.

$$
\begin{aligned}
& 0.150 \mathrm{~mol} \mathrm{NaOH}=L \quad \mathrm{~mol} \mathrm{NaOH}=\mathrm{molHC} \mathrm{H}_{2} \mathrm{O}_{2} \\
& \text { units: } 37.3 \mathrm{~mL} \rightarrow 0.0373 \mathrm{~L} \\
& 0.0373 \mathrm{~L} \times \frac{0.150 \mathrm{~mol} \mathrm{NaOH}}{L} \times \frac{\mathrm{mol} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}}{\operatorname{mol~NaOH}}=0.005595 \mathrm{~mol} \mathrm{HC} \mathrm{H}_{2} \mathrm{H}_{3} \\
& \text { So, } m=\frac{\text { mol } \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}}{\text { L Solution }}=\frac{0.005595 \mathrm{~mol} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}}{0.02502}=0.224 \mathrm{MHC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}
\end{aligned}
$$

Shortcut: Use millimoles!

$$
