2500 L of chlorine gas at 25.0 C and 1.00 atm are used to make hydrochloric acid. How many kilograms of hydrochloric acid could be produced if all the chlorine reacts?

$$H_2 + Cl_2 \rightarrow 2\,HCl$$

---

1 - Convert 2500 L chlorine gas to moles. Use IDEAL GAS EQUATION.
2 - Convert moles chlorine gas to moles HCl. Use CHEMICAL EQUATION
3 - Convert moles HCl to mass HCl. Use FORMULA WEIGHT. (and a g -> kg conversion)

① $PV = nRT$ $\quad n = \frac{PV}{RT}$

$P = 1.00\ atm$ $\quad R = 0.08206\ \frac{L \cdot atm}{mol \cdot K}$

$V = 2500\ L$ $\quad T = 25.0°C = 298.2\ K$

$$n_{Cl_2} = \frac{(1.00\ atm)(2500\ L)}{\left(0.08206\ \frac{L \cdot atm}{mol \cdot K}\right)(298.2\ K)} = 102.1646983\ mol\ Cl_2$$

---

② $mol\ Cl_2 = 2\ mol\ HCl$ ③ $36.458\ g\ HCl = mol\ HCl$

HCl: H - 1x1.008
Cl - 1x35.45
36.458

$$102.1646983\ mol\ Cl_2 \times \frac{2\ mol\ HCl}{mol\ Cl_2} \times \frac{36.458\ g\ HCl}{mol\ HCl} = 7450\ g\ HCl$$

Convert to kiligrams (problem specifies these units for answer) $Kg = 10^3\ g$

$$7450\ g\ HCl \times \frac{Kg}{10^3\ g} = \boxed{7.45\ Kg\ HCl}$$

$2\,HCl + Na_2CO_3 \rightarrow CO_2 + H_2O + 2\,NaCl$

If 48.90 mL of 0.250 M HCl solution reacts with sodium carbonate to produce 50.0 mL of carbon dioxide gas at 290.2 K, what is the pressure of the carbon dioxide gas?

---

1 - Convert 48.90 mL of HCl solution to moles. Use MOLARITY.
2 - Convert moles HCl to moles carbon dioxide. Use CHEMICAL EQUATION.
3 - Convert moles charbon dioxide to pressure. Use IDEAL GAS EQUATION.

① $0.250\,mol\,HCl = L$ $\quad mL = 10^{-3}L$ ② $2\,mol\,HCl = mol\,CO_2$

$$48.90\,mL \times \frac{10^{-3}\,L}{mL} \times \frac{0.250\,mol\,HCl}{L} \times \frac{mol\,CO_2}{2\,mol\,HCl} = 0.0061125\,mol\,CO_2$$

③ $PV = nRT$

$P = \frac{nRT}{V}$

$n = 0.0061125\,mol\,CO_2$ $\quad T = 290.2\,K$

$R = 0.08206\,\frac{L \cdot atm}{mol \cdot K}$ $\quad V = 50.0\,mL = 0.0500\,L$

$$P = \frac{(0.0061125\,mol\,CO_2)\left(0.08206\,\frac{L \cdot atm}{mol \cdot K}\right)(290.2\,K)}{(0.0500\,L)} =$$

$$= \boxed{2.91\,atm}$$

ENERGY

- thermodynamics: the study of energy transfer

Conservation of energy: Energy may change form, but the overall amount of energy remains constant. "first law of thermodynamics"

- ... but what IS energy?

- energy is the ability to do "work"

motion of matter

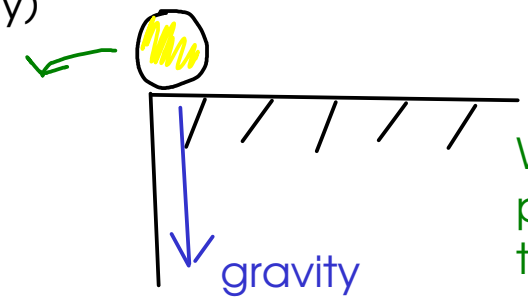
Kinds of energy?

- Kinetic energy: energy of matter in motion $E_K = \frac{1}{2} m v^2$

mass

velocity

- Potential energy: energy of matter that is being acted on by a field of force (like gravity)



When the ball falls, its potential energy is converted to kinetic!

- What sort of energy concerns chemists? Energy that is absorbed or released during chemical reactions.

- Energy can be stored in chemicals ... molecules and atoms.

INTERNAL ENERGY: "U"

related to the kinetic and potential energy of atoms, molecules, and their component parts.

- We measure energy transfer ... which is called HEAT. (HEAT is the flow of energy from an area of higher temperature to an area of lower temperature)

Q : heat

SYSTEM: the object or material under study

SURROUNDINGS: everything else

Type of process	Energy is ...	Sign of Q	Temp of SURROUNDINGS ...
ENDOTHERMIC	transferred from SURROUNDINGS to SYSTEM	+	decreases
EXOTHERMIC	transferred from SYSTEM to SURROUNDINGS	−	increases
